Chainstack and Zebra Systems to collaborate on enterprise blockchain innovation

Singapore, 17 June 2019

Singapore-headquartered Chainstack, a multi-cloud and multi-protocol blockchain Platform as a Service, has signed an MoU with Zebra Systems, based in Czech Republic.

Through this partnership, Zebra Systems has affirmed its commitment to be a test bed for enterprise blockchain innovation in order to achieve a more efficient and effective blockchain deployment for its clients worldwide. Chainstack will provide early access to new functionality, while Zebra will provide Chainstack with feedback and insights gained from various deployments.

Laurent Dedenis, CEO, Chainstack, said: “The blockchain ecosystem is continuously evolving. Our aim is to provide enterprises with a scalable platform so that they can develop safe, secure, reliable solutions now and in the future. With this MoU, Zebra Systems can confidently develop opportunities in the enterprise blockchain space. Both parties also stand to gain through joint market development, research, and deployments.”

About Chainstack

Chainstack is a multi-cloud and multi-protocol Platform as a Service that empowers developers and businesses to rapidly build, deploy, and manage decentralized networks and services. Interoperability, security, analytics, and a host of other advanced features are only a click away on the platform. We are thereby making it simple and cost-effective for developers and enterprises to leverage the potential of distributed ledger technologies.

Currently, Chainstack supports MultiChain, Quorum, and Ethereum protocols and hosting on Google Cloud and Amazon Web Services. Support for more protocols and cloud offerings is planned over the next few months.

Visit chainstack.com to see how developers and global enterprises can rapidly build, deploy, and manage blockchains across a variety of cloud and protocols.
